

CHRIS MERINO

FRONTEND ENGINEER

Miami, FL | (813) 475-0315 | chrismerino.dev@gmail.com | English, Spanish, Portuguese
chrismddev-portfolio.vercel.app | github.com/ChrisMerinoDev | linkedin.com/in/chrismerinodev

PROFESSIONAL SUMMARY

Frontend engineer shipping production web applications with React, Next.js, and TypeScript across healthcare SaaS, e-commerce, and paid client work. Owns features end to end, UI, state, API integration, and deployment, with a strong focus on accessibility and performance. Effective in fast-moving startup and agile teams.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, Tailwind CSS, HTML, CSS, Responsive Design

State & Data: React Hooks, Context API, Zustand, REST APIs, Zod

Backend & Databases: Node.js, Supabase, PostgreSQL

Testing: Jest, Vitest, React Testing Library

E-commerce & UI: Shopify (Liquid), TipTap, Monaco Editor, Web Workers, Accessibility (WCAG / ARIA)

Dev & Ops: Git, GitHub, Vercel, Vite, CI/CD, Jira, Agile / Scrum

PROFESSIONAL EXPERIENCE

Frontend Engineer Intern - MedLaunch Concepts

May 2026 – Sep 2026

MedLaunch Portal - healthcare accreditation, survey, and quality management platform (React, Vite)

- Shipped the platform's first in-app onboarding system, guiding users through 17 interactive product tours with live state gating and branching flows, reducing reliance on manual training across a complex multi-role app.
- Improved performance across the Quality Management System by replacing oversized single-request data loads with true server-side pagination, keeping the ticket-tracking table fast as data volume grew.
- Cut first-search response time from 23 seconds to 2 seconds (91% reduction) by pre-warming a serverless search function on page load, eliminating cold-start delays in the policy module.
- Engineered a corrective-action review workflow with optimistic UI updates and automatic revert on error, removing full-page reloads from a high-frequency daily task, alongside an accessible, ARIA-compliant commenting flow.
- Delivered a compliance-focused policy authoring suite with a TipTap rich-text editor and live acknowledgment tracking, refactoring a monolithic data layer to cut ~490 lines from the core component.

Frontend Engineer (Contract) - HydraFlow Wellness

Mar 2026 – May 2026

Marketing and lead-generation site for a nurse-practitioner-led mobile IV therapy business | Live: hydraflowwellness.com

- Designed and delivered the client's marketing site in Next.js, React, and TypeScript: 10 responsive, SEO-optimized pages serving as the business's primary online presence and acquisition channel.
- Built an accessible, validated lead-capture form with Zod schema validation, real-time formatting, and spam protection, converting visitors into qualified patient inquiries.
- Architected the site around a strongly typed, centralized content configuration, enabling the client to update services and providers in minutes without touching layout or code.

Frontend Engineer (Contract) - MidnightDrip

Oct 2025 – Dec 2025

Custom Shopify storefront theme built in Liquid, HTML/CSS, and vanilla JavaScript | Live: midnightdrip.com

- Independently learned Shopify, Liquid, and the Shopify CLI workflow to ship five production theme sections with configurable schema settings, blocks, and presets, enabling full drag-and-drop, no-code editing for the client.
- Rebuilt the homepage hero into a dual-media system with separate desktop and mobile image or video slots, autoplay video, and conditional theme-editor controls, preserving existing merchandising configuration.
- Improved performance and conversion with responsive images (srcset, sizes), lazy loading on product grids, an ARIA-compliant mobile navigation drawer, and a newsletter signup wired to Shopify's welcome discount flow.

PROJECTS

AceLoop - Gamified Data Structures & Algorithms Platform

2026

Next.js, React, TypeScript, Tailwind CSS, Zustand, Monaco Editor, Supabase | Live: aceloop.vercel.app

- Built a full-stack, gamified coding education platform where users solve DSA problems in an in-browser Monaco editor with instant, test-based grading.
- Engineered a sandboxed code execution engine using Web Workers with timeout protection, safely running untrusted user code without freezing the browser.
- Designed a data-driven progression system with deterministic scoring, XP, six ranks, streaks, and spaced repetition across 36 curated problems spanning 12 algorithmic patterns.

ADDITIONAL EXPERIENCE

Head Coach & Team Leader - TAG USA Gymnastics

Aug 2021 – Present

- Lead competitive gymnastics teams to championship titles, owning season planning, operations, and staff coordination while building software part-time.

EDUCATION & CERTIFICATIONS

Web Developer Certification - Zero To Mastery Academy

2023 – 2025

Audio Technology Diploma - SAE Institute

2021 – 2022
