

CHRIS MERINO

FRONTEND DEVELOPER

chrismerino.dev@gmail.com | chrismdev-portfolio.vercel.app | github.com/ChrisMerinoDev

Fluent in English, Spanish, and Portuguese

PROFESSIONAL SUMMARY

Frontend engineer shipping production web applications with React, Next.js, and TypeScript across enterprise healthcare SaaS and paid client work. Owns features end to end — UI, state, API integration, and deployment — with a strong eye for clean architecture, accessibility, performance, and polished UX. Trilingual collaborator who moves fast in startup and agile team environments.

TECHNICAL SKILLS

Frontend: React 19, Next.js (App Router), TypeScript, JavaScript, Tailwind CSS, HTML5, CSS3

State & Data: React Hooks, Context API, Zustand, REST APIs, Axios, Zod

Backend & Databases: Node.js, Supabase, MongoDB, PostgreSQL

UI & Tooling: TipTap, Monaco Editor, GSAP, Framer Motion, Recharts, Web Workers, Web Audio API

Dev & Ops: Git, GitHub, Vercel, Vite, CI/CD fundamentals

PROFESSIONAL EXPERIENCE

Frontend Engineer Intern — MedLaunch Concepts Apr 2026 – Jul 2026

MedLaunch Portal — healthcare accreditation, survey, and quality management platform (React 19, Vite).

- **Shipped the platform's first in-app onboarding system**, guiding users through 17 interactive product tours with live state gating and branching flows, cutting reliance on manual training and support across a complex multi-role application.
- **Improved performance across the Quality Management System** by replacing oversized single-request data loads with true server-side pagination and a role-gated reviewer view, keeping the ticket-tracking table responsive as data volume grew.
- **Cut first-search wait times from multi-second cold starts to warm responses** by pre-warming a serverless search function on page load, delivering a noticeably faster search experience in the policy module.
- **Engineered a corrective-action review workflow** with optimistic UI updates and automatic revert on error, making reviewer decisions feel instant and removing full-page reloads from a high-frequency daily task, alongside an accessible, ARIA-compliant commenting flow.
- **Delivered a compliance-focused policy authoring suite** with a TipTap rich-text editor and live acknowledgment tracking, and refactored a monolithic data layer into reusable utilities, trimming ~490 lines from the core component.

Freelance Frontend Developer — HydraFlow Wellness 2026

Paid client engagement — marketing and lead-generation site for a nurse-practitioner-led mobile IV and wellness therapy business.

- **Designed and delivered the client's marketing site** in Next.js, React, and TypeScript — 10 fully responsive, SEO-optimized pages serving as the business's primary online presence and customer acquisition channel.
- **Built an accessible, validated lead-capture form** with Zod schema validation, real-time input formatting, and spam protection, giving the business a reliable channel for converting visitors into qualified inquiries.
- **Optimized frontend performance and experience** with scroll-based GSAP animations, a mobile-first responsive layout, and optimized image loading for fast page loads across all devices.
- **Architected the site around a strongly typed, centralized content configuration**, enabling the client to update services and providers in minutes without touching layout or code.

Head Coach & Team Leader — TAG USA Gymnastics 2021 – Present

- **Lead and develop competitive gymnastics teams**, coaching athletes to championship titles through structured, progressive training programs and real-time decisions under pressure.
- **Own season planning, skill progression, and team operations**, mentoring athletes and coordinating schedules, families, and staff to build a high-accountability culture with consistent winning results.

PROJECTS

AceLoop — Gamified Data Structures & Algorithms Platform 2026

Next.js 15, React 19, TypeScript, Tailwind CSS v4, Zustand, Monaco Editor, Supabase, Web Workers

- **Built a full-stack, gamified coding education platform** where users solve DSA problems in an in-browser Monaco editor with instant, test-based grading.
- **Engineered a secure, sandboxed code execution engine** using Web Workers with timeout protection, safely running untrusted user code and terminating infinite loops without freezing the browser.
- **Designed a data-driven progression system** with deterministic scoring, XP, six ranks, streaks, and spaced repetition across 36 curated problems spanning 12 algorithmic patterns and 16 achievements.
- **Boosted load performance with dynamic code splitting** to load the editor only when needed, and implemented offline-first state management with Zustand and optional Supabase cloud sync.

EDUCATION & CERTIFICATIONS

Web Developer Certification — ZTM Academy 2025

Audio Technology Diploma — SAE Institute 2022
